

## How to Choose the Right Glue Gun?

At Venus we stock a huge range of glue guns, accessories and hot melt glues. Whether you need a non-industrial, light or heavy industrial glue gun we have a model that will suit. We have a team of experienced sales people who will provide advice specifically on the best glue gun for your particular application. Glue guns are a popular choice for many reasons and a multitude of uses. What makes hot melt glue so effective is its bonding properties. Bonding glass, metal, wood, plastic and rubber with the right strength and setting speed (open time) is the key. Critical is the compatibility between the hot melt glue, the particular glue gun and specific application. Once you have this combination right, the results can really improve your business operations and productivity.

**Click here** for a guide on selecting the right glue gun.

Our sales and service team give advice on glue guns every day and, here, they highlight the best equipment in the following categories:

### BEST PORTABLE GLUE GUN

Our **VH600 Portable Gas Glue Gun** which is charged using a small canister of butane gas, is easy to use, lightweight and ready to operate in just five minutes. Typically, the operator will get up to 90minutes of use out of one butane gas canister. (the gas canisters for refilling are easy to find in hardware and like shops)

### BEST CRAFT GLUE GUN

The **VH43AA low-melt Glue Gun** is ideal for florists, crafts and hobbies. We like it because its simple to use and safe. Most importantly the low operating temperature reduces the risk of accidental burns. Uses Venus 9025 low temperature **hotmelt glue sticks** and is electrically powered.

### BEST BUDGET GLUE GUN

If you are looking for the best value glue gun for the most economical price, we think the **VH56 Medium Duty** is the one to consider. It's versatile but powerful, has a full hand lever trigger, with a soft feel grip and a fast, three-minute warm up time. Electrically powered and takes **Venus 12mm adhesive glue sticks**.

### BEST INDUSTRIAL GLUE GUN

The **VH58 Hotmelt Glue Gun** which offers high output but only weights 1.25kg. It holds two large **43cm diameter glue slugs** and the soft feel trigger gives great leverage for little effort.

### BEST PNEUMATIC GLUE GUN

The **VH73 Pneumatic Hot Melt Glue Gun** is probably the best pneumatic glue gun due to its large glue slug storage reservoir, which reduces downtime when working on larger jobs. It also comes with changeable nozzles. Powered by compressed air and uses **43cm hot melt glue slugs**.
